<b>T3</b>	↑ 75.3 OK	30 - 70	30.0 - 70.0	ng/dL
<b>Free T3</b>	2.70	1.6 - 3.5	1.60 - 3.50	pg/mL
<b>Thyroglobulin Autoantibody</b>	< 1		< 10	%
<b>Rabies</b>	0.60			IU/ml
<b>Heartworm</b>	Negative		Negative	
<b>Parvo/Distemper Titer</b>	GL verified by repeat measurement			

**UPDATE:** TgAA is normal. Recommend annual retesting. Jean

Dear Daniel/Paula: Thyroid levels are good on the current dose of supplement. Optimal therapeutic response levels are achieved at 4-6 hours post-BID thyroid medication. TgAA & Rabies titer are pending. Jean

To ensure absorption, thyroxine is best given by mouth, at least 1 hour before or 3 hours after a meal. TGAA CONFIRMATORY TEST RANGES < 10% =Negative; 10%-25% =Equivocal;>25%= Positive

If positive (elevated), the TGAA level confirms autoimmune thyroiditis. False positive results can occur if the dog has been vaccinated for rabies within 30 to 40 days. Thyroid hormone supplementation can decrease TGAA levels. Performed using the preferred Non-Specific Binding (NSB) Method.

**Rabies Virus Neutralizing Antibody (RVNA) concentration**

**GOOD LEVEL (See results above)**
